This Git repository includes four files:

The file labeled "netflix-rotten-tomatoes-metacritic-imdb.csv" is the original datasource that I have used and has been downloaded from kaggle. If there are any problems with the raw data, the link to the Kaggle page can be found here: https://www.kaggle.com/datasets/ashishgup/netflix-rotten-tomatoes-metacritic-imdb

The file labeled "WWDC A3 final project.twbx" is the file for my final Tableau project. The file is a Tableau packaged workbook with the .twbx file extension. This packaged workbook includes a single zip file that contains a workbook along with any supporting local file data and background images.

Additionally, there are two files labeled "ANALYSING NETFLIX DATA.png" and "ANALYSING NETFLIX DATA dark ver and guide.png". These were both included as I have noticed that Tableau sometimes has trouble opening background images for dashboards. The "ANALYSING NETFLIX DATA.png" is the background image for the Dashboard labeled "Main dashboard" and the "ANALYSING NETFLIX DATA dark ver and guide.png" Is the background for every other dashboard. You will be able to upload if you click on the background of the dashboard, then the dropdown box, then the function labeled "Edit image…", you will then be able to upload the background by clicking the "choose image" button.
